ABOUT

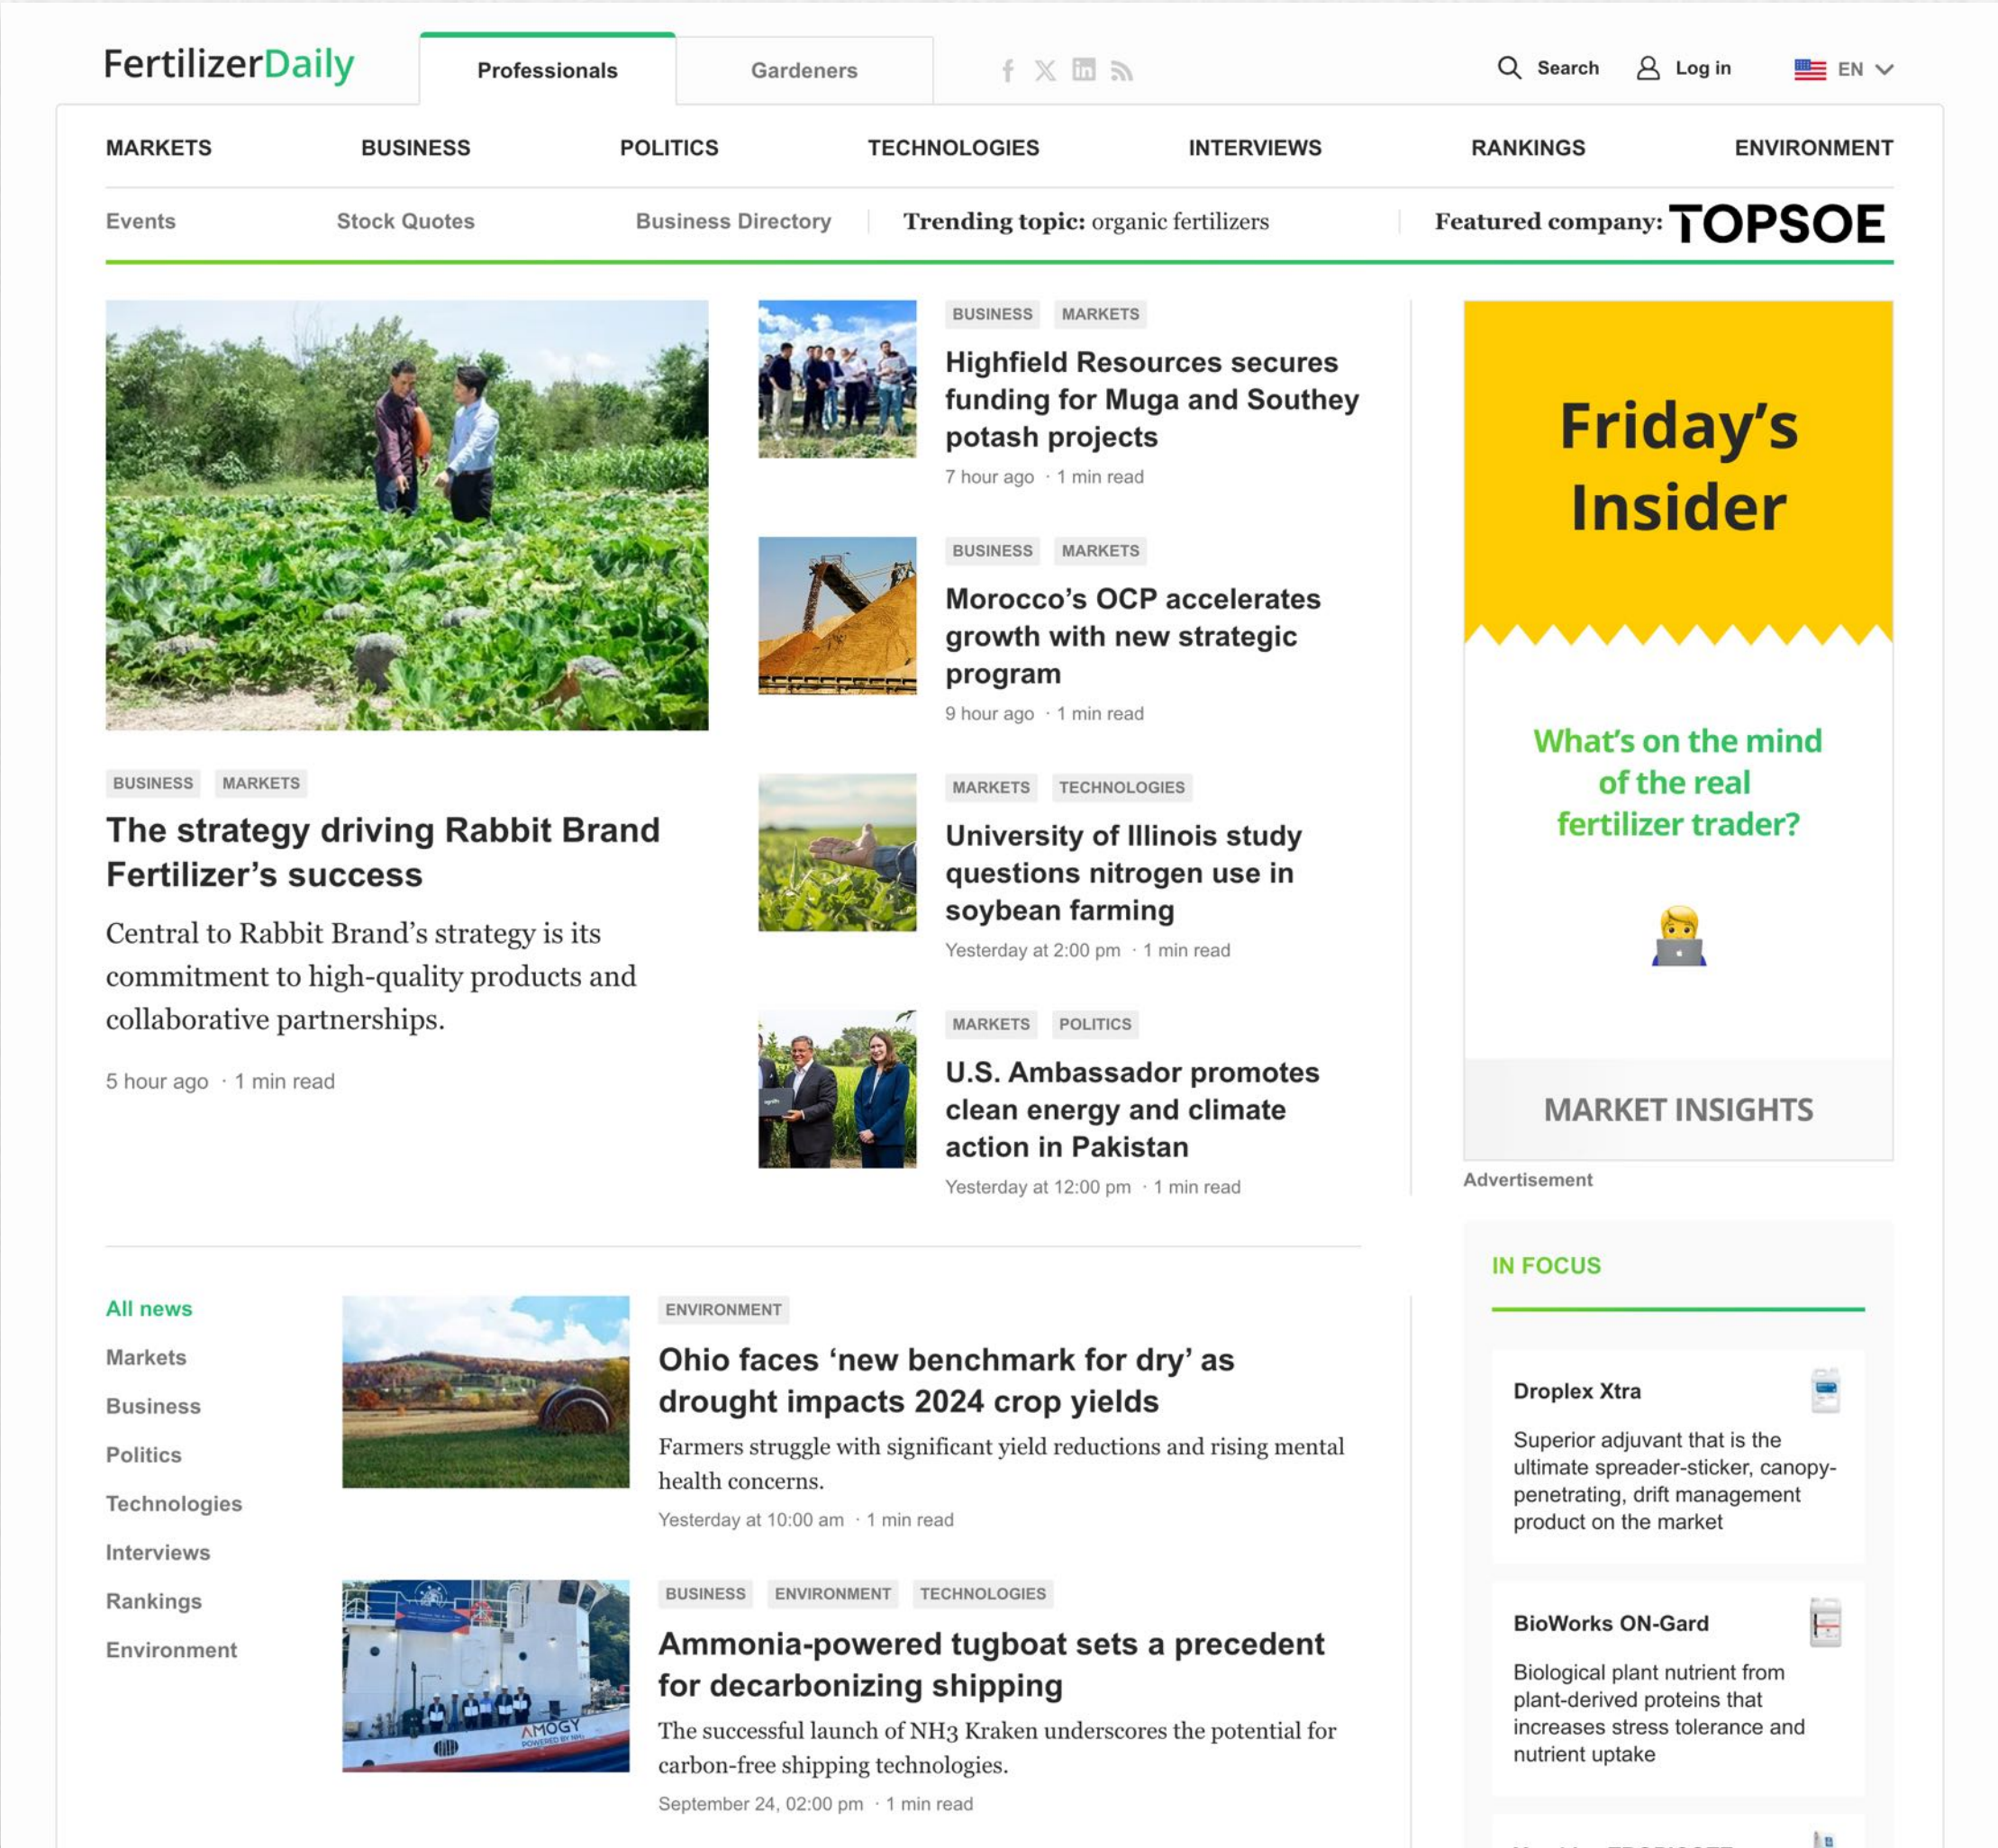

Fertilizer Daily is the leading industrial media and discussion platform focused on covering efficient farming and plant cultivation practices on both domestic and industrial scales.

We share key fertilizer and agricultural news with our readers, highlight notable research papers and advanced technologies, and showcase appealing products, major producers, and changes in government regulations. Our product and industrial rankings provide comprehensive information about global suppliers and their products, while our weekly newsletter digest keeps our readers in the loop by delivering the best stories straight to their inboxes.

CATEGORIES

Markets

The most important agricultural events in different countries that affect global fertilizer production volumes.

Business

News from the largest producers and consumers of agricultural products.

Politics

Key changes in legislation, governmental support measures, and international trade regulations.

Technologies

Digitalization and innovation in the agricultural industry, agrotech startups, disruptive agricultural technologies, and scientific research.

Interviews

Conversations with top managers of prominent companies and startups, governmental officials and market regulators, analysts and experts covering fertilizer and agricultural markets.

Rankings

Companies that can become reliable suppliers of fertilizers or other agricultural products.

Environment

Materials on eco-friendly initiatives, decarbonization practices, eco-focused legislation, and major environmental incidents.

Gardeners

Materials for end consumers and small farmers, useful tips, recommendations, and product reviews.

TESTIMONIALS

FertilizerDaily

« Fertilizer Daily has been super helpful for our startup, keeping us up to speed on the latest industry trends and innovations. Their insights really help us stay ahead of the curve and navigate the market better. I totally recommend it to any producer, researcher, or just anyone who's passionate about agtech! »

Matias Figliozzi

Co-founder & CEO, Unibaio

« Fertilizer Daily plays a crucial role in supporting the agriculture and fertilizer industry by delivering timely and relevant information on market developments, technological advancements, and regulatory changes. It provides essential insights into global fertilizer pricing, production trends, and supply chain dynamics, assisting industry professionals in making well-informed decisions. »

Ilya Motorygin

Managing Partner, GG Trading

« Fertilizer Daily is a unique publication that covers agricultural industry from various aspects, including the topics of innovation. It is a great source for high-quality and fresh content that allows to keep up with the key industrial trends. Fertilizer Daily is a publication that I think helps to quickly dive into the problems of farming industry around the world and showcases their potential solutions. »

Anna Kudinova

Executive Director, ExactFarming

« Syngenta is one of the industry leaders, offering its customers technologies and services for efficient soil cultivation, crops selection and increasing their yields. We are pleased to see how Fertilizer Daily covers key events in the agricultural industry and helps its readers navigate the dense information flow and make the right decisions. »

Konstantin Beldyushkin

General Director, Syngenta Russia

FertilizerDaily

« Meanwhile, Fertilizerdaily.com reported that Pakistan pays special care to ensure the availability of fertilizer to meet food security requirements. The county imported 1.37 million metric tonnes of fertilizer worth \$685mn between July 2023 and June 2024, compared to \$604mn in the previous fiscal year. This 52% increase in quantity and a 13.28% rise in value over the twelve months is significant, indicating a growing demand for fertilizers in Pakistan's agricultural sector. »

Hydroponics, a method of growing plants without soil, uses nutrient-rich water. Krop AI's system enhances this technique with AI, enabling precise control of environmental conditions like light, temperature, and humidity. This is achieved through patented 3D pipes and special spectrum lights that mimic sunlight, which are crucial for photosynthesis but are specifically engineered to provide only the wavelengths needed by plants.

ADVERTISEMENT

710 x 300

The founders, who met while studying engineering at the Mangalore Institute of Technology and Engineering, have brought their technological expertise to agriculture. Their innovations include automated systems that monitor and adjust crucial parameters such as pH and water conductivity, ensuring optimal plant growth. These AI-enhanced systems not only lead to better crop yields but also make hydroponic farming accessible to more farmers, including small and medium growers.

Krop AI's efforts have attracted significant recognition, including support from the Karnataka Government through the Idea2POC grant in the biotech sector and the backing of the AIC Nitte incubation center under the Startup India scheme. In 2022, Krop AI achieved a revenue of 5 million Indian Rupee (\$60,000) with a 40% profit margin, underscoring the economic viability of their innovations.

Morocco's OCP Group, one of the world's top phosphate producers, has launched the Mzinda-Meskala Strategic Program. Announced in December 2022, this initiative aims to significantly increase fertilizer production capacity in the Mzinda-Safi and Meskala-Essaouira regions. It is part of OCP's broader strategy to meet rising global fertilizer demand while adhering to its sustainability targets, including achieving carbon neutrality by 2040.

Robots out in the field? Ten years ago that might have sounded somewhat outlandish, but, due to the latest advances in AI and computer vision, autonomous machines are quickly becoming an indispensable tool for smart, sustainable farming. And, importantly, they can help crop growers to save money on fertilizer and expensive chemicals.

Now, one of the companies spearheading the development of these technologies is GreenField Robotics. It is on a mission to make regenerative farming more efficient and more cost effective. We recently had the privilege of speaking to GreenField's CEO, Clint Brauer, to find out about how the

Conveyors are among the most dynamic and potentially dangerous equipment in bulk handling. The operational basics of belt conveyor systems regarding the hardware installed and the performance required from the components are too often a mystery to many employees. This knowledge gap also creates a safety gap. Since personnel is the most critical resource of any industrial operation, it is crucial to meet workplace safety standards. The consensus among safety professionals is to design the hazard out of the component or system, which historically yields more cost-effective and durable results.
